

# Using the Mirror Preview

This feature allows users to open a live preview in another window/tab, or on another device. This preview refreshes *whenever a change is made* – you do NOT have to refresh it.

**Mirror Preview** lives under your avatar (usually your initial in a circle) in the upper right of the Grove window.

If you want to show the Mirror Preview in a **new tab**, choose **Mirror in New Tab**.

If you want to show the Mirror Preview in a **new window**, choose **Copy Mirror Link** or just pop your tab out into a window.

If you want to look at the Mirror Preview on a **mobile device**, you can send yourself the Mirror Link on Slack, or read the **QR code** with the device.
